

Project Clean Steam Generator, Alderney Hospital CSSD

Construction Value £750K

Client Royal Bournemouth and Christchurch Hospitals NHS Trust

Architect RLM Architects Ltd

Main Contractor Cfes Ltd

Completion November 2013

TNG Provided Full Multi-Disciplinary Design and Lead Consultant

Project Summary This multiple-phased construction scheme involved the provision of a new modular Clean Steam facility and remedial works to existing systems serving the Central Sterile Services Department (CSSD) at Alderney Hospital in Poole.

The new plant was required to enhance the current steam supply to 4 no. sterilisers, to improve the quality of the steam used in the sterilisations of medical and surgical instruments.

TNG provided separate tendered works packages for the plantroom and the external works and remedial works to the existing steam system.

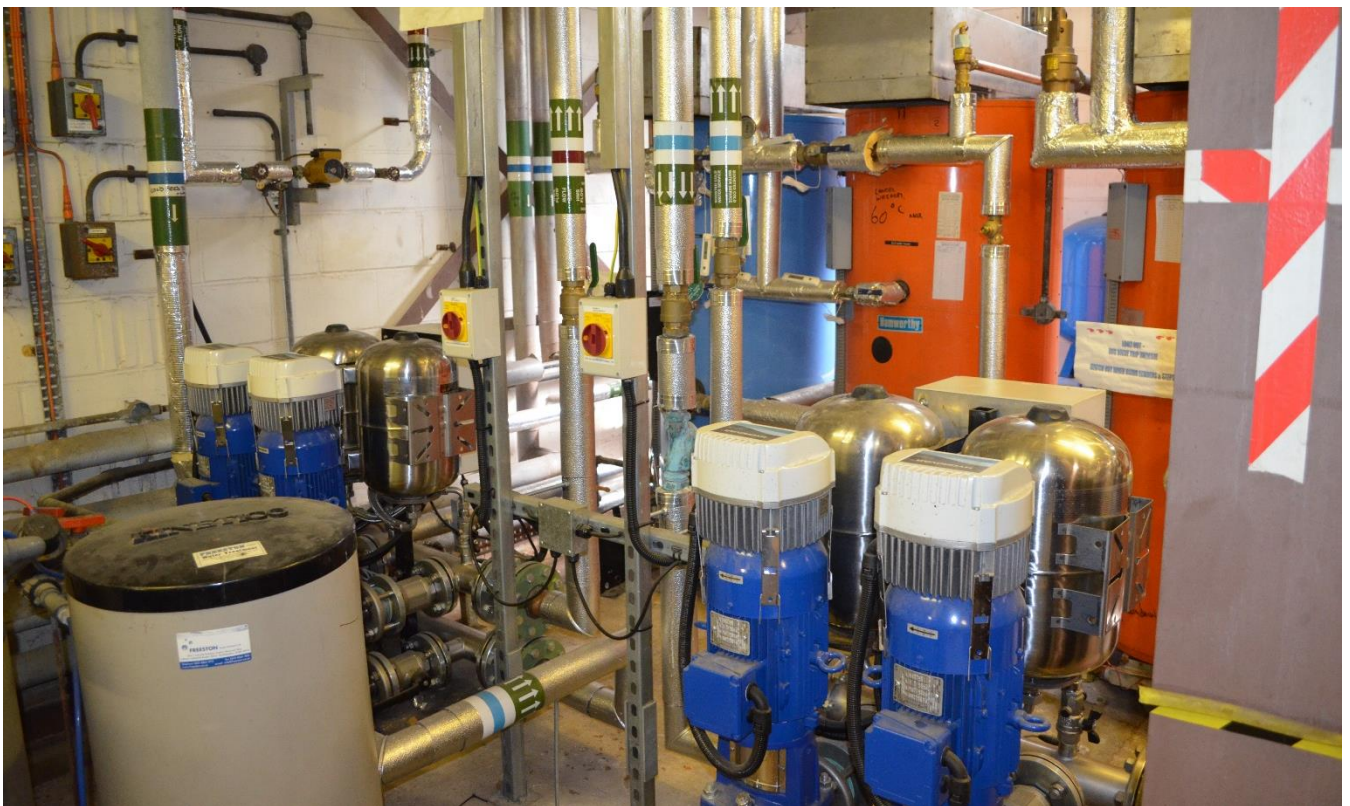

TNG's Designs Included The first project comprised the design, supply, delivery, offloading, setting into position, connecting to external services, testing and commissioning of two self-contained packaged plantrooms containing a new clean steam generator and Reverse Osmosis (RO) plant.

An additional package included the modifications to the existing services currently serving the CSSD Department.
